

## **Abstract**

The present invention discloses a motor vehicle identity anti-fake apparatus and method. The motor vehicle identity includes a microcomputer (1), communicators (2), member anti-fake apparatus (3) and information displays (4). Each of the member anti-fake apparatus (3) has a data and cipher memory and is installed on vehicle license and other members via legal registration. By means of the microcomputer in the management center or detection station, the identity status of vehicle is monitored automatically, which identity status including the true and false of license and whether license and vehicle is matched, whether main member of vehicle and color, design, frame and size of body of vehicle relevant is matched with those of in legal registration, whether vehicle has passed through prescribed examination on time, whether the vehicle has certain specific usage, whether the vehicle belongs to particularly tracked by related enforcement organ, and communication and intuitionistic display is used to provide related information to outside. The present invention is used for anti-fake of motor-vehicle-identity-status and provides to the law administration for recognizing the legal status of motor-vehicle-identity.
